TRIM ACCESORIZED BACK PANELS—

Accessorized back panels are Trim's functional core. Positioned between bases and wall units, they endow the system with functional and operating benefits. They increase usable space, deliver specific functions to the operating area and support deeper wall cabinets. The back panel has a patented, Dada exclusive system that counterbalances and regulates the panel's sliding movement, with the glass disappearing inside the base units. This patented mechanism also allows the glass panel to be lowered for easy maintenance and thorough cleaning.

- _ module sizes 60, 90, 120 cm
- _ back panel in extruded aluminium
- _ counterbalanced door in etched or Stopsol glass, aluminium
- _ door opening system with moulded profile in titan aluminium
- _ white lacquered back panel
- _ vertical sliding mechanism in titan aluminium
- _ standard pull down door device
- _ accessory profiles in aluminium or white lacquer finish
- _ led lighting system
